Solar Swarm — Business Overview

Owner: Martin Pham | Perth, Australia | AI Automation Consultant

Date: March 2026

Version: 2.0

Executive Summary

Solar Swarm is an AI-powered sales automation platform purpose-built for Australian solar installation companies. It eliminates the two biggest revenue leaks in solar sales: slow lead response times and inconsistent follow-up.

The platform integrates directly into a client's existing GoHighLevel CRM and begins operating within 48 hours of setup. Every inbound lead is automatically scored, called by an AI voice agent, and moved through the pipeline — without any action required from the sales team.

Revenue model: $1,500–2,000 AUD/month retainer per client

Margin: 80–90% (total operating costs ~$400 AUD/month)

Break-even: 1 client

The Problem We Solve

Australian solar SMEs (5–15 salespeople) share a universal pattern:

PAIN POINT	BUSINESS IMPACT
Leads sit uncontacted for 2–4 hours	Industry data: response after 5 min = 9x more conversions
Sales reps cherry-pick leads	Hot prospects go cold while unqualified ones get called
No consistent follow-up system	80% of solar deals close after 3+ touchpoints; most reps stop at 1
Owner has no visibility	Can't see pipeline health, call volumes, or what's working
Staff turnover disrupts process	Every new hire needs retraining on the follow-up playbook

Solar Swarm replaces all five failure points with automated, AI-driven systems that run 24/7.

What the Platform Delivers

Lead Qualification (Immediate)

Every new enquiry receives a GPT-4o qualification score from 1–10 within seconds of arriving in GHL. The score is based on:

- Solar interest signals (roof ownership, electricity bill, timeline)
- Contact completeness (phone, email, suburb)
- Competitive context (existing quotes, urgency)

AI Voice Outreach (Within Minutes)

Hot leads (score ≥ 7) trigger an outbound AI phone call via Retell AI. The AI:

- Speaks in natural Australian English
- Qualifies the lead further using a customised script
- Books a site assessment into the sales calendar
- Updates the GHL pipeline with call outcome

Pipeline Automation

- Contacts tagged and moved through stages automatically
- Slack alerts sent to owner and rep for hot leads
- Cold leads placed into long-term nurture sequences
- Weekly performance report delivered every Monday

Live Dashboard

A web-based dashboard (port 5003) shows:

- Pipeline stage counts in real time
- Lead qualification scores and call outcomes
- Swarm experiment status and AI activity
- Budget utilisation and circuit breaker state

Target Client Profile

ATTRIBUTE	SPECIFICATION
Industry	Residential/commercial solar installation
Location	Australia (primarily WA, QLD, VIC, NSW)
Company size	5–15 salespeople
Monthly lead volume	50–500 enquiries
CRM	GoHighLevel (or willing to adopt)
Current pain	Slow response, inconsistent follow-up, no visibility
Decision maker	Owner/Director
Budget signal	Already paying for GHL ($97–$297/month) — understands SaaS

Competitive Differentiation

FEATURE	SOLAR SWARM	GENERIC CRM AUTOMATION	OFFSHORE VA	IN-HOUSE SDR
Response time	< 2 minutes	Hours (if configured)	Business hours	Business hours
24/7 operation	Yes	Yes	No	No
Industry-specific scoring	Yes	No	No	Trained only
Voice AI calls	Yes	No	No	Yes
Setup time	48 hours	Weeks	Days	Months
Monthly cost	$1,500–2,000	$200–500	$3,000–5,000	$8,000–12,000
Scales without cost	Yes	Partly	No	No

Revenue Model

Retainer Structure

```
Tier 1 — Foundation:  $1,500/month
  ├── Lead qualification + pipeline automation
  ├── Weekly performance reports
  └── Standard Slack alerts

Tier 2 — Growth:      $2,000/month
  ├── Everything in Tier 1
  ├── AI voice outreach (Retell integration)
  ├── Custom qualification criteria
  └── Monthly strategy review call

Add-ons (future):
  ├── Multi-location support:     +$500/location
  ├── Custom AI persona/voice:    +$300 one-time
  └── Advanced A/B experiment:    $500 per experiment
```

Unit Economics

```
Revenue per client:          $1,750/month (average)
OpenAI API costs:            ~$150/month (GPT-4o at scale)
Retell AI voice costs:       ~$100/month (500 calls × $0.20)
Infrastructure/hosting:      ~$50/month
Slack/tools:                 ~$50/month
Gross cost per client:       ~$350–400/month
Gross margin:                80%+

At 5 clients:
  Revenue:    $8,750/month
  Costs:      ~$2,000/month
  Profit:     ~$6,750/month
```

Growth Roadmap

Phase 1 — Proof of Concept (Current)

- First 1–2 clients onboarded at reduced rate ($1,000/month)
- Validate qualification accuracy and AI call quality
- Build case studies with real metrics

Phase 2 — Productise (Months 3–6)

- Standard onboarding playbook (48-hour setup)
- Self-service dashboard for clients
- Referral incentive programme
- Target: 5 clients

Phase 3 — Scale (Months 6–12)

- Agency partner model (other consultants white-label)

- Multi-industry expansion (HVAC, pools, property)
- Hiring first contractor support
- Target: 15+ clients, $25,000+/month revenue

Risk Register

RISK	PROBABILITY	IMPACT	MITIGATION
Client churns after month 1	Medium	High	Strong onboarding + first-week WOW moments
OpenAI API price increase	Low	Medium	Margin buffer; switch to Anthropic if needed
GHL changes API	Low	High	CRM router abstraction; HubSpot/SF fallback
AI call quality complaints	Medium	High	Human review toggle; call recording review
Competitor copies approach	High	Medium	Relationships + speed advantage
Regulatory (AI calling laws)	Low	High	Human handoff option; full disclosure

Success Metrics

METRIC	TARGET
Lead response time	< 5 minutes for hot leads
Qualification accuracy	> 80% agreement with human assessment
AI call answer rate	> 40% of outbound calls answered
Pipeline velocity	20%+ increase in stage progression speed
Client retention	> 90% at 3 months
NPS score	> 50
